

INFRASTRUCTURE & SYSTEMS ARCHITECTURE

BUILT TO SCALE.

Distributed platforms for regulated industries — designed from embedded edge to cloud, by Abakwe Carrington.

WHAT I BUILD

- 01 Systems Architecture** — data models, service boundaries & API contracts, mapped before a line of code
- 02 Cloud Infrastructure & DevOps** — AWS, Docker, CI/CD pipelines & zero-downtime deploys
- 03 Distributed Backends & APIs** — Go & Django services engineered to fail gracefully, not cascade
- 04 Reliability & Performance** — p95 latency hunting, caching strategy & query optimization
- 05 Full Stack Delivery** — Next.js front-ends & dashboards, built on solid architecture
